

OURVEIL

Business Requirements Document

Business baseline for the OURVEIL e-commerce initiative

Document	Value
Version	0.2
Status	Draft / In Review
Last Updated	September 2026
Primary Source	OURVEIL Professional Proposal
Working Source	Current OURVEIL Business Requirements Document
Document Purpose	Establish the approved business baseline for the OURVEIL e-commerce initiative and provide the business foundation for subsequent product and technical documentation.

This document defines the business need, business change, affected parties, business requirements, rules, scope, risks, dependencies, and success measures. It is intentionally kept at business level and does not prescribe UI design or technical architecture.

Version: 0.2 Status: Draft / In Review Last Updated: September 2026 Primary Source: OURVEIL Professional Proposal Working Source: Current OURVEIL Business Requirements Document Document Purpose: Establish the approved business baseline for the OURVEIL e-commerce initiative and provide the business foundation for subsequent product and technical documentation.

Important business journey clarification: A guest customer may discover products, view product details, select variants, add items to the cart, and review the cart. Checkout/purchase requires the customer to register or log in to an account. Registered customers can complete the purchase journey and access account-based capabilities.

2. Executive Summary

OURVEIL is a modest-fashion e-commerce initiative initially focused on products such as hijabs, inner bonnets, and accessories. The initiative is intended to establish a structured digital sales channel supported by centralized business operations for products, inventory, orders, payments, shipping, customers, permissions, and reporting.

The customer journey is intentionally divided into two stages:

1. Guest discovery: a visitor can browse, search, filter, view product details, select variants, add products to a cart, and review the cart.
2. Registered purchase: before checkout and completion of a purchase, the customer must register or log in. The registered customer can then provide delivery information, review the order, proceed with the approved payment process, and track the order.

The business value is to provide a clear customer shopping experience while improving operational control, inventory accuracy, payment verification, order visibility, shipping management, and protection of sensitive business information.

The initial payment process is manual/external. The customer is directed to the approved payment-verification channel (currently WhatsApp in the working requirement), and authorized operations staff verify the payment before approval. Additional payment methods and integrations may be introduced later subject to business approval.

3. Business Context

3.1 Current State

The initiative addresses the need for a structured online purchasing and operational process rather than fragmented customer communication and manual business handling.

The business requires:

- a centralized product catalog and product variants;
- reliable inventory visibility;
- a controlled order lifecycle;
- payment verification by authorized staff;
- defined shipping regions and pricing;
- controlled access to sensitive operational and financial information;
- operational and financial reporting.

3.2 Problem / Opportunity Statement

Without a centralized business process, product availability, customer orders, payment verification, shipping information, and operational responsibilities can become difficult to control and audit.

OURVEIL provides an opportunity to establish one consistent business journey from product discovery through order fulfilment and delivery tracking.

3.3 Why Now

The initiative is intended to create the business foundation for digital commerce while keeping the initial release focused on the core storefront and operational needs. More advanced payment, shipping, communication, mobile, country, and language capabilities can be introduced later.

3.4 Strategic Alignment

The initiative supports:

- organized business operations;
- reliable inventory management;
- controlled payment verification;
- transparent order tracking;
- role-based access to sensitive information;
- a scalable foundation for future business expansion.

3.5 Existing Alternatives / Process

The current business need is to move away from fragmented or heavily manual handling toward a centralized customer and operational process.

4. Business Goals and Objectives

ID	Objective	Measure / KPI	Target	Priority
BO-001	Establish a clear digital customer journey from product discovery to purchase and delivery tracking.	Successful registered purchase journeys	TBD	Must
BO-002	Maintain reliable product, variant, and inventory information.	Inventory accuracy / stock discrepancies	TBD	Must
BO-003	Establish controlled payment verification for the initial release.	Verified payment decisions / verification turnaround	TBD	Must
BO-004	Provide centralized order and shipping operations.	Orders progressing through defined lifecycle	TBD	Must
BO-005	Protect sensitive business information through role-based access.	Unauthorized access incidents	0 target	Must
BO-006	Provide operational and financial visibility for the business.	Required reports available	TBD	Must
BO-007	Establish a business foundation that can support future payment, shipping, communication, language, country, and mobile capabilities.	Approved future expansion readiness	TBD	Later

5. Stakeholders

Stakeholder / Group	Role / Interest	Needs / Impact	Decision Authority
Business Owner / Sponsor	Owns business direction	Business value, scope, priorities, approvals	Final business decisions
Customer / Buyer	Purchases OURVEIL products	Clear discovery, purchase, payment, delivery experience	Own purchase decision
Guest Customer	Discovers products before account creation	Product discovery and cart access without immediate registration	No purchase authority until registered
Registered Customer	Completes purchases and manages account	Checkout, saved information, payment verification, order history, tracking	Own account/order information
Operations Team	Runs day-to-day operations	Products, inventory, orders, payments, shipping, customers	According to assigned permissions
Manager	Supervises operational activities	Operational control and staff management	According to granted permissions
Senior Manager / Administrator	Oversees the full operation	Sensitive business and administrative control	Highest operational authority
Product / Inventory Operator	Maintains product and stock information	Accurate catalog and inventory	Assigned modules/actions
Customer Support	Supports customer communication	Order/customer visibility and response	Assigned modules/actions
Finance / Payment Stakeholders	Payment and financial visibility	Payment verification and financial reporting	Subject to approved permissions

Stakeholder / Group	Role / Interest	Needs / Impact	Decision Authority
Legal / Compliance	Business policy and data obligations	Privacy, retention, policy requirements	TBD

6. Customer / User Context

6.1 Guest Customer

The guest customer can:

- browse products;
- search and filter products;
- open product pages;
- review product details;
- select product variants;
- add products to the cart;
- review the cart.

Business boundary: the guest customer cannot complete checkout or purchase the product as a guest. To proceed with checkout, the customer must register or log in.

6.2 Registered Customer

The registered customer can:

- perform all major guest shopping activities;
- maintain a persistent cart;
- save address and phone information;
- manage a wishlist;
- review an order before purchase;
- complete checkout;
- use the approved payment-verification process;
- view order history;
- track orders;
- manage their customer account.

6.3 Operations Users

Operations users are responsible for business activities according to their permissions, including:

- product management;
- inventory management;
- order management;
- payment verification;
- customer management;
- shipping management;

- employee management;
 - reporting;
 - audit review.
-

7. Scope and Boundaries

7.1 In Scope

- E-commerce storefront
- Product catalog, categories, attributes, and variants
- Guest product discovery and cart
- Customer registration and login required for checkout
- Registered customer account
- Cart and checkout
- Shipping regions and prices
- Manual/external payment verification
- WhatsApp payment-verification flow for the current release
- Orders and order history
- Order tracking
- Inventory management and reservation
- Customer management
- Employee management
- Roles and permissions
- Reporting
- Settings
- Audit history
- Required policy/information pages
- Arabic/English and RTL/LTR readiness

7.2 Out of Scope for v1

- Standalone mobile application
- Multi-vendor marketplace
- Enterprise ERP/accounting system
- Large-scale marketing execution
- Professional product photography
- Bulk catalog entry as a development responsibility
- Direct payment-gateway integration
- Automatic shipping-provider integration

7.3 Future Considerations

The business may later introduce:

- additional payment methods and payment gateways/cards;
- shipping-company integrations;
- additional customer communication channels such as SMS/WhatsApp automation;
- mobile applications;
- additional countries;
- additional languages.

These are future considerations unless separately approved for a release.

8. Business Requirements

ID	Business Requirement	Rationale	Source / Stakeholder	Priority	Success Evidence
BR-001	Provide customers with a structured product-discovery journey including categories, search, filtering, product details, variants, and cart review.	Enable customers to discover and evaluate products before purchase.	Proposal / Business	Must	Customer can discover products and review a cart.
BR-002	Require a customer to register or log in before completing checkout and purchasing products.	Establish an identified customer record for the purchase journey.	Current BRD decision	Must	Guest can reach cart but cannot complete checkout without authentication.
BR-003	Provide registered customers with account-based purchasing and customer-management capabilities.	Support repeat purchasing and customer continuity.	Proposal / Business	Must	Registered customer can complete checkout and access account/order history.
BR-004	Maintain reliable product, variant, and inventory information.	Prevent incorrect availability and overselling.	Proposal	Must	Business can identify and control available quantities.
BR-005	Reserve inventory for created orders and release/deduct quantities according to approved business rules.	Protect inventory accuracy during the order lifecycle.	Proposal / Business	Must	Inventory movements match order outcomes.
BR-006	Provide a controlled payment-verification process for the initial release.	Ensure payment is actually received before approval.	Proposal / Business	Must	Authorized staff can verify, approve, reject, or request new evidence.
BR-007	Provide the approved WhatsApp payment-verification journey for the current release.	Provide the agreed initial external payment-verification channel.	Current BRD decision	Must	Registered customer can be redirected to the approved WhatsApp verification flow.
BR-008	Support an extensible payment model that can accommodate additional approved payment methods later.	Allow business expansion without redefining the overall customer purchase journey.	Business direction	Later	Future payment methods can be introduced through approved change scope.
BR-009	Provide centralized order management with clear order lifecycle status and order history.	Give operations and customers visibility into order progress.	Proposal / Business	Must	Orders can be monitored from creation through delivery or closure.
BR-010	Provide shipping-region and shipping-price management and show applicable shipping information before payment.	Give customers and operations predictable delivery costs.	Proposal / Business	Must	Applicable shipping cost is known before payment.
BR-011	Protect customer, payment, financial, and operational information through role-based access.	Reduce unauthorized access and protect sensitive business information.	Proposal	Must	Restricted information is accessible only to authorized roles.
BR-012	Record material operational and administrative actions for auditability.	Support accountability and investigation of sensitive changes.	Proposal / Business	Must	Payment, inventory, order-status, and permission changes are traceable.

ID	Business Requirement	Rationale	Source / Stakeholder	Priority	Success Evidence
BR-013	Provide operational and financial reporting required by the business.	Support management visibility and decision-making.	Proposal / Business	Must	Required reports are available to authorized users.
BR-014	Support Arabic/English and RTL/LTR business presentation.	Support the intended customer and business markets.	Proposal	Must	Key journeys operate in both supported language directions.
BR-015	Provide a business foundation for future countries, languages, payment, shipping, communication, and mobile capabilities.	Support future growth without making future scope part of v1.	Proposal / Business	Later	Future expansion can be planned as controlled subsequent releases.

9. Business Rules and Policies

BRULE-001 □ Checkout Requires an Account

A guest customer may discover products and manage a cart, but must register or log in before completing checkout and purchasing a product.

BRULE-002 □ Payment Verification

For payment methods requiring manual verification, payment evidence submitted by the customer is not by itself sufficient to approve payment. Authorized operations staff must verify actual receipt.

BRULE-003 □ Payment Status

Each order shall have an associated payment status reflecting the current payment condition, such as Pending, Under Review, Approved, Rejected, or Refunded where applicable.

BRULE-004 □ Order Status

Each order shall have an order status representing its fulfilment stage, such as Pending, Confirmed, Preparing, Ready for Shipping, Shipped, Out for Delivery, or Delivered.

BRULE-005 □ Order History

Completed or previously processed orders shall remain available in Order History for authorized review.

BRULE-006 □ Inventory Availability

Customers shall not be allowed to purchase quantities greater than the available quantity of the selected variant.

BRULE-007 □ Inventory Reservation

Required inventory shall be reserved when an order is created, according to the approved order and payment rules.

BRULE-008 □ Inventory Release

Reserved inventory shall be released when an order is cancelled, rejected, or expires according to the approved business policy.

BRULE-009 □ Inventory Deduction

Inventory shall be deducted according to the approved payment and fulfilment rules after payment approval.

BRULE-010 □ Sensitive Information

Financial, customer, payment, and other sensitive operational information shall only be accessible to authorized roles.

BRULE-011 □ Role-Based Access

Users shall only perform operations permitted by their assigned roles and permissions and shall not grant permissions beyond their authorized level.

BRULE-012 □ Auditability

Material business actions, including payment decisions, inventory adjustments, order-status changes, and permission changes, shall be recorded with sufficient information to identify what changed, when, and by whom.

10. Business Process / Current-to-Future Change

10.1 Customer Purchase Journey

Guest discovery

Browse → Search/Filter → Product Page → Select Variant → Add to Cart → Review Cart

Account boundary

Register / Login required

Registered purchase

Review Order → Delivery Information → Shipping Cost → Confirm Order → WhatsApp Payment Verification → Business Payment Review → Order Fulfilment → Tracking → Delivery

10.2 Payment Verification Journey

Customer submits payment information → Operations receives verification request → Authorized employee verifies actual payment receipt → Approve / Reject / Request New Evidence → Record Decision → Continue or

hold order

10.3 Inventory Journey

Available Stock → Order Created → Inventory Reserved → Payment/Order Outcome → Deduct OR Release → Record Inventory Movement

10.4 Manual vs Automated Boundary

The initial release intentionally keeps payment verification and shipping operations under controlled business processes rather than requiring direct payment-gateway or automatic shipping-provider integrations.

11. Assumptions

ID	Assumption	Status / Validation
AS-001	Egypt/Cairo is the initial launch geography.	Confirm with business
AS-002	Manual/external payment verification is the initial payment model.	Confirm with business
AS-003	WhatsApp is the approved payment-verification channel for the current release.	Confirm with business
AS-004	Customers must register or log in before checkout.	Current working requirement
AS-005	Additional payment methods will be introduced later rather than being required for v1.	Confirm with business
AS-006	The business will provide required product information, images, policies, payment information, and shipping information.	Proposal
AS-007	Exact KPI targets will be agreed separately.	TBD

12. Constraints

- v1 should remain focused on the core e-commerce and operational business journey.
- Direct payment-gateway integration is not part of v1.
- Automatic shipping-provider integration is not part of v1.
- The initial payment process depends on external/manual verification.
- Access to sensitive business information must follow approved role permissions.
- Launch geography, shipping zones, and prices must be defined by the business before release.
- Arabic and English, including RTL/LTR presentation, are required business considerations.

13. Dependencies

Dependency	Business Impact
Business-provided product data and media	Required for the storefront catalog

Dependency	Business Impact
Shipping regions and prices	Required to calculate customer delivery cost
Payment account / payment instructions	Required for the initial payment process
WhatsApp payment-verification channel	Required for the current payment-verification journey
Business policies	Required for cancellation, refund, return, and exchange decisions
Stakeholder approvals	Required to establish the approved business baseline
Hosting / infrastructure	Required to operate the service
Authentication provider, if used	Supports customer sign-in

14. Risks

Risk	Impact	Likelihood	Mitigation / Response	Owner
Manual payment verification delays orders	High	Medium	Define verification process and SLA	Operations
Incorrect inventory information	High	Medium	Inventory controls, reservation rules, and audit trail	Operations
Unauthorized access to financial/customer data	High	Medium	Role-based access, least privilege, auditability	Business / Technical
Shipping zones or prices are not finalized	High	Medium	Confirm launch geography and pricing before release	Business Owner
Customer drop-off at account-registration boundary	Medium	TBD	Monitor checkout conversion and confirm business acceptance of account requirement	Product Owner
External WhatsApp/payment-verification dependency	Medium	TBD	Define fallback process and ownership	Operations
Unclear cancellation/refund/return policy	High	Medium	Confirm business policies before launch	Business Owner
Undefined KPI targets	High	High	Agree measurable success criteria before approval	Business Owner

15. Cost / Benefit / Value Model

Expected Business Value

- Establish a structured digital sales channel.
- Improve customer visibility from discovery through fulfilment.
- Improve inventory reliability and reduce overselling risk.
- Improve payment-control and verification processes.
- Centralize operational information.
- Improve accountability through role-based access and audit history.
- Establish a foundation for future payment, shipping, communication, country, language, and mobile expansion.

Cost Drivers

The business should consider:

- product/catalog preparation;
- payment-verification operations;
- shipping operations;
- hosting/infrastructure;
- external communication/payment services;
- ongoing operational support;
- future integrations.

No financial figures are asserted until the business provides approved budget and cost assumptions.

16. Success Metrics

Metric Area	Measure	Baseline	Target
Customer	Guest-to-registration / checkout conversion	TBD	TBD
Customer	Completed registered purchases	TBD	TBD
Orders	Total orders and orders by status	TBD	TBD
Orders	Delivered orders	TBD	TBD
Payments	Approved / rejected / pending payments	TBD	TBD
Payments	Payment verification turnaround	TBD	TBD
Inventory	Inventory discrepancies	TBD	TBD
Customers	New customers	TBD	TBD
Customers	Repeat customers	TBD	TBD
Customers	Average order value	TBD	TBD
Products	Best-selling / slow-moving products	TBD	TBD
Shipping	Orders by region and shipping fees	TBD	TBD

17. Transition Requirements

- Confirm the final customer account and checkout policy before release.
 - Confirm launch geography and shipping zones/prices.
 - Confirm v1 payment methods and WhatsApp verification process.
 - Confirm cancellation, refund, return, and exchange policies.
 - Define staff roles and the final permission matrix.
 - Provide product catalog data and required media.
 - Provide customer-facing policies and required information pages.
 - Confirm KPI baselines and targets.
 - Prepare operational staff for payment, inventory, order, and customer-management responsibilities.
-

18. Open Questions and Decisions

ID	Question / Decision	Impact	Owner	Status
OQ-001	Confirm the final approved business objectives and BRD identifiers.	High	Business Owner	Open
OQ-002	Confirm exact KPI definitions and target values.	High	Business Owner	Open
OQ-003	Confirm the required payment-verification SLA.	High	Operations	Open
OQ-004	Confirm the final v1 payment methods and whether WhatsApp is the sole verification channel.	High	Business Owner	Open
OQ-005	Confirm the account requirement before checkout as the final customer policy.	High	Business Owner	Open
OQ-006	Confirm cancellation and refund policy.	High	Business Owner	Open
OQ-007	Confirm return/exchange policy.	High	Business Owner	Open
OQ-008	Confirm launch shipping zones, prices, and delivery periods.	High	Operations	Open
OQ-009	Confirm the final role and permission matrix.	High	Business Owner	Open
OQ-010	Confirm supported browser/device versions.	Medium	Product / Technical	Open
OQ-011	Confirm accessibility standard/target.	Medium	Product Owner	Open
OQ-012	Confirm data retention and deletion requirements.	High	Business / Legal	Open
OQ-013	Confirm whether Google sign-in is required or optional for v1.	Medium	Product Owner	Open
OQ-014	Confirm mandatory notification channels at launch.	Medium	Product Owner	Open
OQ-015	Confirm rules for expired unpaid orders and inventory reservations.	High	Operations	Open

19. Approval / Acceptance

This BRD becomes the business baseline when the designated business owner and required stakeholders approve:

- the business objectives;
- customer and stakeholder definitions;
- the guest-to-registered customer boundary;
- business requirements;
- business rules;
- scope and exclusions;
- payment and shipping approach;
- roles and permissions;
- success measures;
- unresolved decisions that must be closed before release.

Approval of this BRD does not constitute approval of UI design, technical architecture, implementation details, or API/database design. Those artifacts must trace back to the approved business requirements.

Appendix A □ Business Journey Summary

Guest Customer

Discover → Search/Filter → Product Page → Select Variant → Add to Cart → Review Cart → Register/Login

Registered Customer

Login → Browse/Search → Product Page → Select Variant → Cart → Review Order → Delivery Information → Shipping Cost → Confirm Order → WhatsApp Payment Verification → Order Processing → Tracking → Delivery

Operations

Manage Catalog → Manage Inventory → Receive Orders → Verify Payment → Confirm/Reject → Prepare → Ship → Update Status → Complete

Appendix B ■ BRD to PRD Handoff

The approved BRD establishes the business baseline. The PRD should translate these business requirements into product behavior without changing the approved business scope.

Key handoff areas:

- Guest discovery vs. registered checkout boundary;
 - customer account requirements;
 - payment-verification journey;
 - inventory reservation and release rules;
 - order lifecycle;
 - shipping rules;
 - roles and permissions;
 - auditability;
 - success metrics;
 - unresolved decisions.
-
