

Product Requirements Document — OURVEIL

1. Document Control

Field	Value
Product Name	OURVEIL
Document	Product Requirements Document (PRD)
Version	0.1
Status	Draft
Product Owner	TBD
Contributors / Reviewers	TBD
Last Updated	September 2026
Related BRD Version	TBD
Primary Source	OURVEIL_Professional_Proposal_AR_RTL_Fixed.pdf

Document status: This PRD is a draft derived from the current Ourveil proposal. Business decisions that are not yet formally confirmed are marked TBD or listed under Open Questions.

2. Product Summary

2.1 One-Sentence Product Definition

OURVEIL is an e-commerce platform for selling modest-fashion products, initially focused on hijabs, inner bonnets, and accessories, consisting of a customer storefront and an internal operational management system.

The proposal describes the product as providing a digital sales channel together with centralized management of products, inventory, orders, payments, shipping, permissions, and reporting.

2.2 Problem Solved

OURVEIL is intended to provide a structured digital purchasing and operational process instead of relying on fragmented communication and manual operational handling.

The product is intended to:

- provide customers with a clear online shopping journey;
- centralize product and inventory information;
- centralize order and payment status;
- provide controlled operational access for staff;
- provide visibility into shipping and operational/financial information.

The proposal specifically identifies "organized operations", "reliable inventory", and "controlled permissions" as core product goals.

2.3 Primary Users

Customer types

1. Guest customer

- Browse products
- Search/filter products
- Add products to cart
- Checkout without creating an account
- Submit payment proof
- Track an order using order number and phone number

2. Registered customer

- All major shopping capabilities
- Persistent cart
- Saved addresses
- Wishlist
- Order history
- Order tracking

3. Operations team

- Manage products
- Manage inventory
- Manage orders
- Review payments
- Manage customers
- Manage shipping
- Manage employees/permissions
- View reports according to permissions

These user types and capabilities are described in the proposal.

2.4 Core Value Proposition

OURVEIL should provide:

- a clear and convenient online shopping experience;

- accurate product and inventory information;
- controlled payment verification;
- transparent order tracking;
- centralized business operations;
- role-based access to sensitive information.

3. Product Goals and Non-Goals

3.1 Goals

ID	Product Goal	Business Trace	Priority
PG-001	Enable customers to discover and purchase OURVEIL products online.	BO-001 / BR-001	Must
PG-002	Provide a complete customer order journey from product discovery through delivery tracking.	BO-001 / BR-002	Must
PG-003	Provide reliable product, variant, and inventory management.	BO-002 / BR-003	Must
PG-004	Provide controlled manual payment verification for the initial release.	BO-003 / BR-004	Must
PG-005	Provide operational order and shipping management.	BO-004 / BR-005	Must
PG-006	Protect sensitive business information through role-based access.	BO-005 / BR-006	Must
PG-007	Provide operational and financial reporting required by the business.	BO-006 / BR-007	Should
PG-008	Provide a product foundation that can support future payment, shipping, language, and mobile capabilities.	BO-007 / BR-008	Should

Traceability note: The BO-### / BR-### identifiers above are placeholders until the approved BRD establishes the final business-objective and business-requirement IDs.

3.2 Non-Goals

The initial product does **not** include:

- a standalone mobile application;
- a multi-vendor marketplace;
- a large enterprise ERP/accounting system;

- a complete enterprise resource planning solution;
- marketing/advertising execution;
- professional product photography;
- large-scale catalog data entry as a development responsibility;
- complete payment-gateway integration in the initial release;
- automatic shipping-company integration in the initial release.

The proposal explicitly identifies several of these as outside the initial scope or future work.

4. Users, Personas, and Roles

Role / Persona	Primary Goals	Key Responsibilities / Permissions	Priority
Guest Customer	Discover and purchase products	Browse, search, filter, cart, checkout, payment proof, tracking	Must
Registered Customer	Purchase and manage account	Shopping, saved addresses, wishlist, order history, tracking	Must
Employee	Perform assigned operational tasks	Access only assigned modules/actions	Must
Manager	Manage operational activities	Products, inventory, orders, staff according to permissions	Must
Senior Manager / Administrator	Manage the entire operation	Full administrative capabilities including sensitive financial areas	Must
Product/Inventory Operator	Maintain catalog and inventory	Product and inventory operations according to permissions	Should
Customer Support Operator	Handle customer communications	View orders/messages and respond according to permissions	Should

The proposal defines a hierarchy in which the senior manager can manage managers and employees, while managers can manage employees within their granted permissions. It also requires least-privilege access and prohibits privilege escalation.

5. User / Stakeholder Requirements

5.1 Customer Requirements

ID	User Need	Source	Business Trace	Priority
UR-001	Customers need to browse available products.	Proposal	BR-001	Must
UR-002	Customers need to find products using search/filtering.	Proposal	BR-001	Must
UR-003	Customers need to select a specific product variant before purchase.	Proposal	BR-001	Must
UR-004	Customers need to review cart contents before checkout.	Proposal	BR-001	Must
UR-005	Customers need to know shipping cost before payment.	Proposal	BR-001	Must
UR-006	Customers need to submit payment evidence for manual payment.	Proposal	BR-004	Must
UR-007	Customers need to track order and payment status.	Proposal	BR-002	Must
UR-008	Registered customers need access to order history and saved addresses.	Proposal	BR-001	Should

The proposal defines the customer journey from product discovery through order delivery/tracking.

6. Product Scope and Release Definition

6.1 MVP / v1

The initial product should include:

Customer Storefront

- Product discovery
- Categories
- Search
- Filtering
- Product details
- Product variants
- Cart
- Checkout
- Shipping calculation

- Manual payment instructions
- Payment proof upload
- Order tracking
- Customer account
- Order history
- Saved addresses
- Wishlist
- Required policy/information pages

Operations

- Product management
- Category/attribute management
- Variant management
- Inventory management
- Order management
- Payment verification
- Customer management
- Employee management
- Roles and permissions
- Shipping management
- Reports
- Settings
- Audit history

These capabilities are described throughout the proposal's storefront and dashboard sections.

6.2 In Scope

Product

- E-commerce storefront
- Customer accounts
- Guest checkout
- Product catalog
- Product variants
- Inventory

- Cart
- Orders
- Manual payments
- Payment verification
- Shipping regions and prices
- Order tracking
- Customer communications
- Administration
- Reporting
- Role-based permissions
- Audit history

6.3 Out of Scope

- Standalone mobile application
- Enterprise ERP/accounting system
- Multi-vendor marketplace
- Large-scale marketing execution
- Product photography
- Bulk catalog entry
- Automatic payment-gateway integration for v1
- Automatic shipping-provider integration for v1

6.4 Future / Later

The proposal identifies future possibilities including:

- payment gateways/cards;
- shipping-company integrations;
- SMS/WhatsApp;
- mobile application;
- additional countries;
- additional languages.

7. Core User Journeys / Use Cases

7.1 Guest Purchase

Actor: Guest customer

Trigger: Customer wants to purchase a product.

Preconditions:

- Product is available.
- Delivery area is supported.
- Product has a valid price.

Main Flow:

1. Customer opens the storefront.
2. Customer browses/searches products.
3. Customer selects a product.
4. Customer selects the required variant.
5. Customer adds the variant to the cart.
6. Customer reviews the cart.
7. Customer enters delivery information.
8. System determines shipping cost based on the selected area.
9. Customer selects an available payment method.
10. System displays payment instructions.
11. Customer creates the order.
12. System generates a unique order number.
13. Customer performs the payment externally.
14. Customer uploads payment evidence.
15. Operations reviews the payment.
16. Payment is approved, rejected, or additional evidence is requested.
17. Approved order moves to confirmation/preparation.
18. Order progresses through shipping.
19. Customer tracks the order.

The proposal defines this journey and explicitly states that payment occurs outside the website in the initial release.

Failure / Exception Paths

- Product becomes unavailable.
- Price changes before order creation.

- Requested shipping area is unsupported.
 - Payment evidence is missing.
 - Payment evidence is unclear.
 - Payment cannot be verified.
 - Payment amount differs from expected amount.
 - Payment is rejected.
 - Order expires/cancels.
 - Customer requests refund.
-

7.2 Registered Customer Purchase

Same purchase journey as guest checkout, plus:

- persistent cart;
 - saved addresses;
 - wishlist;
 - order history;
 - account-based order tracking.
-

7.3 Payment Verification

Actor: Authorized operations employee

Trigger: Customer submits payment evidence.

Main flow:

1. Payment evidence enters the review queue.
2. Authorized employee opens payment information.
3. Employee verifies actual receipt of payment.
4. Employee approves or rejects payment.
5. Employee may request new evidence.
6. System records the decision.
7. Order state is updated accordingly.

The proposal specifically states that administration must verify actual receipt rather than relying only on the uploaded image.

7.4 Inventory Management

Actor: Authorized operations employee

Main flow:

1. Employee views product variants.
2. Employee views available quantities.
3. Product variant stock is reserved when an order is created.
4. Payment approval causes the required inventory deduction.
5. Expired reservations are released.
6. Inventory changes are recorded.
7. Low-stock conditions are surfaced.

The proposal specifies inventory reservations, deductions, release behavior, movement history, and prevention of unavailable stock sales.

8. Feature / Capability Overview

Capability	Purpose / User Value	Related Requirements	Priority
Product Catalog	Allow customers to discover products	UR-001, UR-002	Must
Product Variants	Allow selection of exact purchasable configuration	UR-003	Must
Cart	Allow customers to manage intended purchases	UR-004	Must
Checkout	Collect customer/delivery information	UR-004	Must
Manual Payment	Support initial low-complexity payment model	UR-006	Must
Payment Verification	Confirm received payments	UR-006	Must
Inventory	Prevent inaccurate stock availability	UR-003	Must
Orders	Manage purchase lifecycle	UR-007	Must
Shipping	Calculate and manage delivery	UR-005	Must
Order Tracking	Give customers visibility into progress	UR-007	Must
Customer Accounts	Provide persistent customer functionality	UR-008	Should
Administration	Operate the business	BR-xxx	Must

Capability	Purpose / User Value	Related Requirements	Priority
Reporting	Support operational/financial visibility	BR-xxx	Should
Permissions	Protect sensitive operations/data	BR-xxx	Must
Audit	Record sensitive actions	BR-xxx	Must

9. Functional Requirements

9.1 Product Catalog

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-001	The product shall allow customers to browse published products by category.	UR-001	Must	Demonstration
FR-002	The product shall allow customers to search and filter products using supported product attributes.	UR-002	Must	Test
FR-003	The product shall display the available variants of a product.	UR-003	Must	Test
FR-004	The product shall display the current availability status of a purchasable variant.	UR-003	Must	Test
FR-005	The product shall allow authorized staff to create and update product information.	BR-003	Must	Test
FR-006	The product shall allow authorized staff to manage product categories and attributes.	BR-003	Must	Test

The proposal defines product categories, variants, attributes, availability and product management.

9.2 Cart and Checkout

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-007	The product shall allow customers to add available variants to a cart.	UR-003	Must	Test
FR-008	The product shall allow customers to modify cart quantities.	UR-004	Must	Test
FR-009	The product shall allow customers to remove cart items.	UR-004	Must	Test

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-010	The product shall revalidate price, availability, and quantity before creating an order.	UR-004	Must	Test
FR-011	The product shall calculate shipping based on the selected supported delivery area.	UR-005	Must	Test
FR-012	The product shall display the final payable amount before the customer proceeds with payment.	UR-005	Must	Test
FR-013	The product shall generate a unique order identifier when an order is created.	UR-007	Must	Test

The proposal explicitly requires revalidation before order creation and calculation of shipping before payment.

9.3 Manual Payment

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-014	The product shall display the payment methods enabled by authorized staff.	UR-006	Must	Test
FR-015	The product shall display payment instructions and the required amount.	UR-006	Must	Test
FR-016	The product shall allow a customer to submit payment evidence.	UR-006	Must	Test
FR-017	The product shall allow authorized staff to review submitted payment evidence.	BR-004	Must	Test
FR-018	The product shall allow authorized staff to approve or reject a payment.	BR-004	Must	Test
FR-019	The product shall allow authorized staff to request replacement payment evidence.	BR-004	Must	Test
FR-020	The product shall record payment status changes and the responsible user.	BR-004	Must	Inspection/Test

The initial payment model is explicitly manual: the customer transfers externally, uploads evidence, and administration verifies receipt before approval.

9.4 Orders

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-021	The product shall maintain a separate order status from payment status.	BR-005	Must	Test
FR-022	The product shall support the defined order lifecycle states.	BR-005	Must	Test
FR-023	The product shall allow authorized staff to update order status.	BR-005	Must	Test
FR-024	The product shall record order status history.	BR-005	Must	Inspection
FR-025	The product shall allow customers to view their order status.	UR-007	Must	Test

The proposal explicitly separates order state from payment state and defines both state models.

9.5 Inventory

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-026	The product shall maintain inventory at the purchasable variant level.	BR-003	Must	Test
FR-027	The product shall reserve inventory when an order is created.	BR-003	Must	Test
FR-028	The product shall release expired inventory reservations.	BR-003	Must	Test
FR-029	The product shall prevent customers from purchasing unavailable quantities.	BR-003	Must	Test
FR-030	The product shall record inventory additions, deductions, returns, cancellations, and manual adjustments.	BR-003	Must	Inspection
FR-031	The product shall record the user, date, and reason for manual inventory adjustments.	BR-003	Must	Inspection
FR-032	The product shall indicate low-stock conditions to authorized staff.	BR-003	Should	Test

9.6 Shipping

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-033	The product shall allow authorized staff to manage supported delivery areas.	BR-005	Must	Test
FR-034	The product shall associate shipping prices with supported delivery areas.	BR-005	Must	Test
FR-035	The product shall display the estimated delivery period before order submission.	UR-005	Must	Test
FR-036	The product shall prevent customers from completing payment before an unsupported delivery area has a final shipping amount.	BR-005	Must	Test
FR-037	The product shall allow authorized staff to update shipping prices and estimated delivery periods.	BR-005	Must	Test

The proposal states that the initial geography is Egypt, beginning with Cairo, with additional areas added later.

9.7 Roles and Permissions

ID	Functional Requirement	Trace	Priority	Acceptance / Verification
FR-038	The product shall restrict administrative capabilities according to assigned permissions.	BR-006	Must	Security Test
FR-039	The product shall enforce sensitive authorization decisions on the server side.	BR-006	Must	Security Test
FR-040	The product shall prevent a user from granting permissions they do not possess.	BR-006	Must	Security Test
FR-041	The product shall apply least-privilege access to employee accounts.	BR-006	Must	Security Test
FR-042	The product shall record permission changes in the audit history.	BR-006	Must	Inspection
FR-043	The product shall restrict financial information to authorized roles.	BR-006	Must	Security Test

The proposal specifies least privilege, hierarchy, prevention of privilege escalation, server-side enforcement, and audit logging.

10. Business Rules

BRULE-001 — Payment Verification

A payment shall not be considered approved solely because a customer uploaded an image. Authorized operations staff must verify actual receipt of the payment.

Source: Proposal.

BRULE-002 — Inventory Availability

The product shall not allow the sale of quantities that are unavailable.

Source: Proposal.

BRULE-003 — Order/Payment Separation

Order status and payment status shall be maintained separately.

Source: Proposal.

BRULE-004 — Sensitive Information

Financial and other sensitive operational information shall only be accessible to authorized roles.

Source: Proposal.

BRULE-005 — Auditability

Sensitive changes such as permission changes, payment approvals, inventory adjustments, and status changes shall be recorded.

Source: Proposal.

11. Roles and Permissions

Resource / Action	Guest Customer Employee			Manager	Senior Manager
Browse products	✓	✓	—	—	—
Purchase	✓	✓	—	—	—
View own orders	—	✓	—	—	—
Manage products	—	—	According to permission	According to permission	✓
Manage inventory	—	—	According to permission	According to permission	✓
Review payments	—	—	According to permission	According to permission	✓
View financial reports	—	—	Restricted	Restricted	✓

Resource / Action	Guest	Customer	Employee	Manager	Senior Manager
Manage employees	—	—	—	According to permission	✓
Manage permissions	—	—	—	According to permission	✓
View audit records	—	—	Restricted	According to permission	✓

Exact role-to-permission mapping remains subject to stakeholder confirmation where the BRD has not formally established the final authorization matrix.

12. Data Requirements

12.1 Core Product Data

The product must support:

- products;
- categories;
- product images;
- attributes;
- attribute values;
- product variants;
- prices;
- quantities;
- availability.

12.2 Customer Data

The product must support:

- customer identity;
- contact information;
- addresses;
- sessions/accounts;
- order history.

12.3 Order Data

Each order should preserve the information applicable at the time of purchase, including:

- customer information;
- delivery address;
- delivery area;
- shipping cost;
- purchased product information;
- variant information;
- quantity;
- price;
- totals;
- order status history.

This historical snapshot prevents later product changes from altering historical orders.

12.4 Payment Data

The product should preserve:

- payment method;
- payment evidence;
- submitted amount;
- reference number where available;
- payment review history;
- approval/rejection status;
- refunds.

12.5 Audit Data

Sensitive actions should preserve:

- action;
- previous state;
- new state;
- timestamp;
- responsible user;
- reason/notes where applicable.

13. Integration Requirements

ID	Integration	Purpose	Release	Failure Behavior
IR-001	Image/media service	Store product/payment images	v1	Upload failure must be communicated to the user
IR-002	Email service	Send relevant order/payment/account notifications	v1	Failure must not silently lose the underlying transaction
IR-003	Google authentication	Optional customer sign-in	v1	Customer should retain alternative authentication path
IR-004	Payment gateway	Direct electronic payment	Future	Manual payment remains available
IR-005	Shipping provider	Automated tracking/status updates	Future	Manual operational updates remain available
IR-006	SMS/WhatsApp provider	Customer communications	Future	Existing communication mechanisms remain available

The proposal distinguishes initial integrations from future integrations.

14. Non-Functional Requirements

14.1 Performance

NFR-001

The storefront should provide responsive browsing and product discovery suitable for mobile and desktop users.

NFR-002

Product images should be optimized to reduce unnecessary page-loading overhead.

NFR-003

Large product/order/report result sets should support pagination.

The proposal specifically identifies image optimization, caching, pagination and query monitoring as performance considerations.

Exact latency targets are **TBD** pending stakeholder/product confirmation.

14.2 Security

NFR-004

The product shall require authentication for protected customer and administrative functions.

NFR-005

The product shall enforce authorization for sensitive actions.

NFR-006

The product shall protect passwords and authentication credentials.

NFR-007

The product shall validate uploaded files and restrict unsafe file types.

NFR-008

The product shall record sensitive administrative actions.

NFR-009

The product shall prevent unauthorized access to sensitive financial information.

The proposal defines authentication, authorization, input validation, file restrictions and audit logging.

14.3 Privacy

The product shall restrict access to customer and operational data according to authorization.

Customer analytics/reporting shall respect privacy and access permissions.

Specific retention, deletion, consent, and data-residency requirements are **TBD** and require stakeholder/legal confirmation.

14.4 Accessibility

The product should support:

- readable text;
- adequate contrast;
- keyboard navigation;
- accessible image alternatives;
- comfortable touch targets.

The proposal explicitly mentions contrast, touch sizes, keyboard navigation and alternative text.

Formal accessibility standard/target: **TBD**.

14.5 Compatibility

The product shall support:

- mobile devices;

- desktop devices;
- tablet-sized screens;
- Arabic;
- English;
- RTL/LTR interfaces;
- agreed major browsers.

The exact browser/version support matrix remains **TBD**.

14.6 Localization

The product foundation should support:

- Arabic;
- English;
- RTL;
- LTR;
- region-specific shipping information.

The proposal explicitly requires bilingual/bi-directional readiness from the beginning.

15. States, Edge Cases, and Error Behavior

15.1 Product / Inventory

The product must handle:

- unavailable product;
- insufficient quantity;
- expired reservation;
- manual inventory adjustment;
- cancellation;
- return;
- concurrent purchase attempts.

15.2 Payment

The product must handle:

- payment not submitted;
- payment evidence submitted;

- payment under review;
- payment rejected;
- request for new evidence;
- payment amount mismatch;
- refund.

These payment states are defined in the proposal.

15.3 Orders

The product must support:

Pending Payment

Pending Review

Confirmed

Preparing

Ready for Shipping

Shipped

Out for Delivery

Delivered

It must also support cancellation/rejection where applicable.

16. Notifications and Communications

The product should support notifications for relevant events including:

- order creation;
- payment submission;
- payment approval;
- payment rejection/request for new evidence;

- order status changes;
- password reset.

The proposal identifies email notifications for order creation, payment approval, status changes and password reset.

Future channels may include SMS or WhatsApp when an approved provider and operating budget are available.

17. Analytics and Telemetry

The product should provide business-relevant measurements including:

Orders

- total orders;
- orders by status;
- delivered orders;
- cancelled orders.

Payments

- submitted payments;
- approved payments;
- rejected payments;
- refunds;
- payment differences.

Inventory

- low-stock products;
- reserved quantities;
- inventory movements.

Customers

- new customers;
- repeat customers;
- average order value.

Products

- best-selling products;
- slow-moving products;
- sales by category;

- sales by color/material.

Shipping

- orders by region;
- shipping fees collected;
- recorded actual shipping costs.

These reporting categories are explicitly described in the proposal.

Exact KPI targets are **TBD**.

18. Acceptance Criteria / Product Acceptance

The initial product should not be considered ready until the following areas are verified:

Customer Journey

- Customer can browse products.
- Customer can select a valid variant.
- Customer can add/remove/update cart items.
- Customer can complete checkout.
- Shipping cost is calculated before payment.
- Customer can submit payment evidence.
- Customer can view order status.

Payment

- Authorized staff can review payment evidence.
- Payment can be approved.
- Payment can be rejected.
- New evidence can be requested.
- Payment state is recorded.

Inventory

- Available inventory is correctly represented.
- Inventory is reserved appropriately.
- Unavailable quantities cannot be purchased.
- Inventory changes are auditable.

Permissions

- Unauthorized users cannot access restricted functions.

- Financial information is restricted.
- Permission changes are auditable.
- Privilege escalation is prevented.

Design / Compatibility

- Mobile experience works.
- Desktop experience works.
- Arabic RTL layout works.
- English LTR layout works.
- Required browser/device matrix passes.

These areas align with the proposal's acceptance criteria.

19. Prioritization

The following prioritization is proposed for the PRD:

Must

- Product catalog
- Product variants
- Search/filter
- Cart
- Checkout
- Shipping calculation
- Manual payment
- Payment proof
- Payment verification
- Orders
- Inventory
- Order tracking
- Core administration
- Roles/permissions
- Audit history

Should

- Customer wishlist

- Detailed operational reports
- Customer messaging
- Google sign-in
- Enhanced reporting

Could

- Additional communication channels
- Advanced shipping capabilities
- Additional operational analytics

Won't for v1

- Standalone mobile app
- Direct payment gateway
- Automated shipping-provider integration
- Multi-vendor marketplace
- Enterprise ERP/accounting system

Future integrations and mobile capabilities are explicitly identified as later possibilities in the proposal.

20. Dependencies, Assumptions, and Risks

20.1 Dependencies

- Business-provided product information
- Product images
- Shipping regions/prices
- Payment account information
- Business policies
- External media service
- Email service
- Required hosting/infrastructure
- Stakeholder approvals

The proposal explicitly states that the client provides branding, images, product data, policies, payment methods and shipping areas.

20.2 Assumptions

ID	Assumption	Status
AS-001	Egypt/Cairo is the initial launch geography.	Proposal — confirm
AS-002	Manual payment is the initial payment model.	Proposal — confirm
AS-003	Additional countries will be introduced later rather than in v1.	Proposal — confirm
AS-004	Business will provide required product data and media.	Proposal
AS-005	Exact KPI targets will be defined separately.	TBD

20.3 Risks

Risk	Impact	Status / Response
Manual payment verification delays orders	High	Define verification process/SLA
Incorrect inventory information	High	Inventory controls and audit trail
Unauthorized access to financial data	High	Role-based access and authorization
Shipping areas/prices not defined	High	Confirm launch geography and pricing rules
External service limitations	Medium	Monitor provider limits and define fallback
Unclear success metrics	High	Confirm measurable KPIs

21. Open Questions / TBDs

This section is intentionally explicit.

ID	Open Question	Impact	Owner	Status
OQ-001	What are the final approved business objectives and BRD IDs?	High	Product Owner	Open
OQ-002	What exact KPIs define product success after launch?	High	Product Owner	Open
OQ-003	What are the exact target values for the KPIs?	High	Product Owner	Open
OQ-004	What is the required payment-verification SLA?	High	Operations	Open
OQ-005	What are the final payment methods for v1?	High	Business Owner	Open
OQ-006	What is the exact cancellation/refund policy?	High	Business Owner	Open

ID	Open Question	Impact	Owner	Status
OQ-007	What is the final return/exchange policy?	High	Business Owner	Open
OQ-008	What are the exact shipping zones and prices at launch?	High	Operations	Open
OQ-009	What is the final role/permission matrix?	High	Business Owner	Open
OQ-010	What are the supported browser/device versions?	Medium	Product/Technical	Open
OQ-011	What accessibility standard should be followed?	Medium	Product Owner	Open
OQ-012	What are the data retention/deletion requirements?	High	Business/Legal	Open
OQ-013	Is Google sign-in mandatory or optional for v1?	Medium	Product Owner	Open
OQ-014	What notification channels are mandatory at launch?	Medium	Product Owner	Open
OQ-015	What are the exact rules for expired unpaid orders and inventory reservations?	High	Operations	Open

22. Traceability Matrix

This matrix will be finalized after the BRD is approved.

Product Requirement User Need Business Requirement / Objective Verification

FR-001	UR-001	BR-001 / BO-001	Test
FR-007	UR-004	BR-001 / BO-001	Test

 - **Data Model:** TBD
 - **Security / Threat Model:** TBD
 - **Delivery Roadmap / Backlog:** TBD
-

Document Status

Current status: Draft

Important: This PRD should not be treated as the final approved product baseline until the related BRD has been confirmed and the high-impact open product decisions above have been resolved.

Next step: Validate the product requirements against the approved BRD and stakeholder decisions.
